1926 GREETINGS

Even though we got started in our new business late last March, too late to issue a catalog, we are pleased to inform our good friends that our sales were very satisfactory and we anticipate a healthy increase this year.

We know, too, our big asset is the good will of our customers. We appreciate the business you have given us and trust the service we rendered will merit the continuance of our pleasant relations.

WE THANK YOU!

SEED SHORTAGES.

ONION SEED On account of the extreme heat and drought the 1925 crop of onion seed is practically a failure and the seed saved is reported to be poor germination. This is said to be the worst failure in the history of the seed trade and very little carry over.

We are short but won't buy in the open market because there is so much seed of doubtful origin and weak germination offered. We will not jeopardize our good reputation for square dealing nor cause our customers loss of time and crop by selling them inferior seed of any variety.

BEANS PEAS Snow, rains and cold unseasonable weather materially reduced the supply of these three items.

CORN Cover your requirements by ordering early.

The Grower for Market

Our interests are mutual, hence our special endeavors will be to render service which will bring the greatest returns.

USPULUN FOR THE FLORIST AND NURSERYMAN

Every florist, market gardener, farmer and nurseryman should keep on hand a liberal supply of USPULUN for regular and emergency use.

FOR SEED TREATMENT

Seed-borne diseases that are responsible for heavy losses may be controlled by the simple process of soaking for a brief period in USPULUN solution. Such treatment, in addition to controlling the seed-borne diseases, prevents mold and decay of seed that are normally slow to germinate, thereby producing a heavier and more vigorous stand of plants.

FOR "DAMPING OFF" CONTROL
